Zero contrast procedure by use of unenhanced MRA and CO₂ angiography

Jos C. van den Berg, MD PhD
Ospedale Regionale di Lugano, sede Civico, Lugano
University of Bern
Switzerland
Zero Contrast Procedures

- Use of non-enhanced MRA and CO$_2$ angiography for work-up
  - (EVAR)
  - Peripheral applications
Iodinated contrast

- Nephrotoxicity
- Allergic reactions
Iodinated contrast

Gd-based contrast

- Occurrence of nephrogenic systemic fibrosis
- Nephrotoxicity
  - Various case reports of acute renal failure at high dose
  - Safe in dosage <0.4 mmol/kg

Gemery et al, AJR 1998; 171:1277-1278
Kaufman et al, Radiology 1999; 212:280-284
Le Blanche et al, AJR 2002; 179:1023-1028
Roserioreanu et al, JVIR 2005;16:297-298
Nyman et al, Radiology 2002; 223:311-318
MRA without contrast

• In-flow techniques (TOF)
  – Limited FOV
  – Susceptible to artifacts

Wheaton AJ et al JMRI 2012;36:286–304
**Figure 1:** Diagram of QISS pulse sequence. A two-dimensional single-shot balanced steady-state free precession (bSSFP) pulse sequence is used to image arterial spins within the section during diastole, when flow is slow or absent. $k_y$ = phase-encoding line, $QI$ = quiescent interval, $\alpha/2$ = one half the radiofrequency excitation flip angle.
MRA-QISS

Edelman RR et al, Magnetom Flash 2014
CTA-MRA QISS-DSA PAD

QISS vs. CE-MRA PAD
QISS vs. CE-MRA PAD
QISS vs. CE-MRA PAD

QISS

CE-MRA
QISS vs. CE-MRA PAD
QISS-MRA vs. CTA vs. DSA

• QISS-MRA provides high diagnostic accuracy compared with DSA
• QISS-MRA less prone to image artifacts than CTA
• QISS-MRA better visualizes heavily calcified segments with impaired flow
• QISS-MRA obviates the need for contrast administration in PAD patients

Varga-Szemes A et al, JACC Cardiovasc Imaging 2017;10:1116-1124
CO₂ angiography

- Lack of toxicity or allergic reactions
- Rapid intravascular clearance
- Buoyancy (potentially disadvantageous)
- Ultra-low viscosity/density
- Reflux (ostial depiction)
- Nonmiscibility (fluid displacement)
- Colorless and odorless (potentially dangerous with ‘old technology’)
- Compressibility (pressure build-up)

Sharafuddin MJ et al JVS 2017;66:618-637
Old technology
Automated CO$_2$ injector

Conclusions

• Current technology allows for zero-contrast procedures for peripheral arterial endovascular procedures
• Zero-contrast procedures are not a ‘myth’ anymore
• MORE CO$_2$!
MORE CO$_2$!
Zero contrast procedure by use of unenhanced MRA and CO$_2$ angiography
